

SINGLE HEIGHT CROSSOVER
for use as L, T, X

busSTRUT (double-deck)		
Product	Length	Catalog Number
I/1	Single	ICM-S-(B)-ST-X

Finish - G=Galvanized W=White B=Black

ONE over ONE crossovers are for use with two busSTRUT lengths. Each crossover is a single unit for building L, T, X crossover grid configurations. The slimline crossover locks both busSTRUT lengths with set screws.

Crossovers provide the mechanical connection for building runs, rows, and grids. One universal crossover serves as an X, T, or an L intercept. The ONE over ONE crossover is used when one single-deck length of busSTRUT intersects another single-deck length of busSTRUT.
